Lake Texoma Water Treatment Plant Expansion Project

243 La Cima Drive, Sherman, Texas 75090

Wholly Funded by: Texas Water Development Board

Drinking Water State Revolving Fund

Project involves expansion of Plant from 10 MGD to 20 MGD of finished water capacity. The expanded plant will use Reverse Osmosis process for demineralization. Project will provide for a sustainable potable water supply with facilities to serve the population of Sherman and regional customers.

The new treatment process will provide improved water quality, and increases future expansion capacity at the existing site.
